

# Servo-u MR Conditional Ventilator

The power of you

This document is intended to provide information to an international audience outside of the US.

GETINGE 

**Magnetic field indicator**

Shows safe distance to the MR scanner and alerts if too close.

**Auto-lock handle**

Locks all wheels simultaneously once your hand leaves the handle.

**Flexible positioning**

Patient tubing connections and rotatable screen eases placement on either side of the MR table.

**Distance view and Servo Compass**

Let you see vital parameters at a glance from the control room and alerts of any deviation from set targets.

# Designed for safety Crafted for you

Let's face it: there are plenty of concerns during a typical working day. Ventilation in the MR room doesn't have to be one of them.

**Put your mind at rest**

Positioning can be a challenge. That's why we put so much care into the design of our magnetic field indicator. It guides you to a safe position, with visual and audible alerts.

You get further assurance from the auto-lock handle, which locks all four wheels as soon as your hand leaves the ventilator. The large 15" screen can be tilted and rotated through 360° for a comfortable view from any angle.

Servo-u ventilators also reduce workload and minimize use errors and close calls.<sup>1</sup> The Servo-u MR Conditional Ventilator is an effective complement in

the Servo family, designed for use with 1.5T or 3T MR scanners up to 20mT. The common user interfaces save training time and ease patient transitions.

### **In good hands**

Patients with very different needs come to the MR room. That's why Servo-u MR supports all patient categories, including neonates. Capabilities range from invasive and non-invasive ventilation to high-flow therapy, and the system comes with a range of defined accessories and consumables.

Sustaining protective ventilation from the control room is easy. However hectic things get, the Distance view with

Servo Compass provides a clear, instant view of whether vital parameters are in line with ventilation targets.

### **Built around your needs**

Naturally, the machine itself is just one part of the equation. Our well-developed clinical and support organization backed the first MR ventilator more than 25 years ago and has been part of product development ever since. We are on hand close to you, serving and providing resources for more than 100 000 Servo ventilators worldwide, from the ICU to the MR room.

Welcome to the Servo family – the new power of you.
